Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            May

C;Comment: Complement C5 contains two disulfide-linked chains, formed by removal of f (beta and alpha' chains).

C;Comment: Activation of C5 initiates the spontaneous assembly of the late complement is the foundation upon which the membrane attack complex is assembled.

C;Comment: C5a has potent spasmogenic and chemotactic activity.

C;Genetics:

```

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (beta and alpha' chains).

C:Comment: Activation of C5 initiates the spontaneous assembly of the 1s the foundation upon which the membrane attack complex is assembled.

C:Comment: C5a has potent spasmogenic and chemotactic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    R;Gennaro, R.; Simonic, T.; Negri, A.; Mottola, C.; Secchi, C.; Ronchi, S.; Romeo, D. Title: Perfect score: Sequence: US-09-651-685A-5 114

1 CCYDGASVNNDETCEQRAAR 20

Scoring table: BLOSUM62 Gapop 10.0 , Gapext 0.5

Searched: 112892 seqs, 41476328 residues

Total number of hits satisfying chosen parameters: 112892

Minimum DB seq length: 0 Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Database : SwissProt\_40:\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                    SIMILARITY: TO C3, C4 AND ALPHA-2-MACROGLOBULIN.
SIMILARITY: CONTAINS 1 ANAPHYLATOXIN-LIKE DOMAIN.
CAUTION: REF. 3 SEQUENCE DIFFERS FROM THAT SHOWN FROM
ONWARD DUE TO THE PRESENCE OF AN ALU REPEAT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                FUNCTION: DERIVED FROM PROTEOLYTIC DEGRADATION OF COMPLEMENT C5, C5 ANAPHYLATOXIN IS A MEDIATOR OF LOCAL INFLAMMATORY PROCESS. IT INDICES THE CONTRACTION OF SMOOTH MUSCLE, INCREASES VASCULAR PERMEABILITY AND CAUSES HISTAMINE RELEASE FROM MAST CELLS AND BASOPHILIC LEUKOCYTES. C5A ALSO STIMULATES THE LOCOMOTION OF POLYMORPHONUCLEAR LEUKOCYTES (CHEMOKINESIS) AND DIRECT THEIR MIGRATION TOWARD SITES OF INFLAMMATION (CHEMOTAXIS).

SUBUNIT: C5 PRECURSOR IS FIRST PROCESSED BY THE REMOVAL OF 4 BASIC RESIDUES, FORMING TWO CHAINS, BETA & ALPHA, LINKED BY A DISULFIDE BOND. C5 CONVERTASE ACTIVATES C5 BY CLEAVING THE ALPHA CHAIN, FURNISH C5A ANAPHYLATOXIN & GENERATING C5B (BETA CHAIN + ALPHA)
                                                                                                                      HGNC:1331; C5

FUNCTION: DERIVED FROM PROTEDLYTIC DEGRADATION OF COMPLEMENT C4,

CC4A ANAPHYLATOXIN IS A MEDIATOR OF LOCAL INFLAMMATORY PROCESS. IT

INDUCES THE CONTRACTION OF SMOOTH MUSCLE, INFLAMMATORY PROCESS. IT

INDUCES THE CONTRACTION OF SMOOTH MUSCLE, INFLAMMATORY PROCESS.

PERMEABILITY AND CAUSES HISTAMINE RELEASE FROM MAST CELLS AND

BASOPHILIC LEUKOCYTES.

SUBUNIT: THIS PROTEIN IS SYNTHESIZED AS A SINGLE-CHAIN PRECURSOR

AND, PRIOR TO SECRETION, IS ENTYMATICALLY CLEAVED TO FORM A TRIMER

OF NONLIDENTICAL CHAINS (ALPHA, BETA, AND GAMMA).

-I- POLYMORPHISM: HUMAN COMPLEMENT CAMPONENT C4 IS POLYMORPHIC WITH AT

LEAST TWO LOCI, C4A AND C4B. 13 ALLELES OF C4A AND 22 ALLELES OF

C4B HAVE BEEN DETECTED. THE ALLELE SHOWN HERE IS C4A4.

RNA-4 hypothetical 31.9 kDa protein.
Beet necrotic yellow vein mosaic virus (isolate G1).
Viruses; ssrNA positive-strand viruses, no DNA stage.
RCHI_TaxID=12257;

BIOPHYS. ACTA 1162:230-232(1993).

-!- FUNCTION: IS ABLE TO INHIBIT ALL FOUR CLASSES OF PROTEINASES BY A UNIQUE "TRAPPING" MECHANISM. THIS PROTEIN HAS A PEPTIDE STRETCH, CALLED THE 'BAIT RECION' WHICH CONTAINS SPECIFIC CLEAVAGE SITES FOR DIFFERENT PROTEINASES. WHEN A PROTEINASE CLEAVES THE BAIT REGION, A CONFORMATIONAL CHANGE IS INDUCED IN THE PROTEIN WHICH TRAPS THE PROTEINASE. THE ENTRAPPED ENZYME REMAINS ACTIVE AGAINST LOW MOLECULAR WEIGHT SUBSTRATES (ACTIVITY AGAINST HIGH MOLECULAR WEIGHT SUBSTRATES IS GREATLY REDUCED).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nielsen K.L., Sottrup-Jensen L.; "Evidence from sequence analysis that hen egg-white ovomacroglobulin (ovostatin) is devoid of an internal beta-Cys-gamma-Glu thiol
